

SITE QUALITY ASSURANCE PLAN

Modu-Loc's Site Quality Assurance Plan is a monthly inspection and service package for your site containment system. As part of an overall site maintenance strategy, the Site Quality Assurance Plan can help ensure that the integrity of your temporary fencing is maintained after the initial install.

Maintain the security and integrity of your perimeter

Identify and address potential hazards

Protect site workers and the public

Save time and money on site management

Why do I need the Site Quality Assurance Plan?

Today's construction projects are increasingly more complex. This means that requirements on site are shifting frequently, with tools, equipment, and even the footprint of the site changing according to the phase of the project.

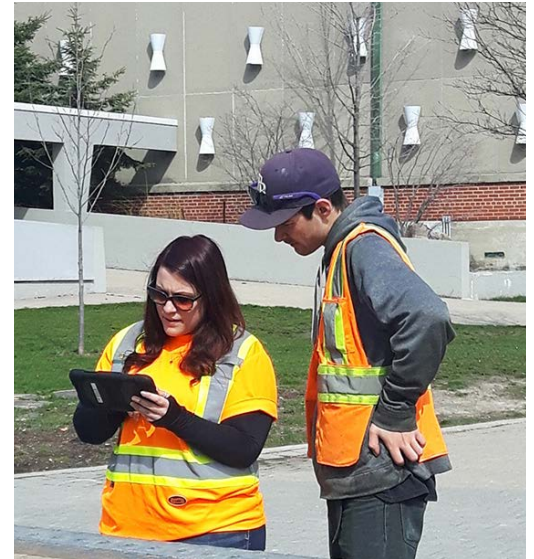

Even if your temporary fence was professionally installed, it may be dismantled, moved, or damaged by your workers or subcontractors over the duration of the project. Over time, your site containment system may no longer be as stable or secure as the day it was installed.

Drawing on 25 years of industry experience, Modu-Loc has developed a Site Quality Assurance Plan to help our customers manage their site containment system while ensuring the safety of the public.

What does the Site Quality Assurance Plan include?

Your enrolment in the Site Quality Assurance Plan will include a monthly site visit from one of our field specialists, who will perform the following:

- An inspection of your perimeter fencing using our site quality checklist, ensuring optimal stability and security according to Modu-Loc's best practices
- A hazard assessment to identify any risks the fence line might pose to public or site employee safety, and provide recommendations for corrective actions
- Routine maintenance, such as straightening fence lines, resetting panels, tightening u-bolts, and other minor corrections
- An inventory count and check conditions of Modu-Loc fence panels and all related components to identify any discrepancies against contract totals
- Photograph all fence lines upon completion of maintenance to provide visual records

Each month, you will receive a customized report of all information collected during the site visit. This report package is your evidence of ongoing maintenance and due diligence.

What else should I know about the Site Quality Assurance Plan?

The monthly cost for the Site Quality Assurance Plan is \$150 plus tax. This amount is only billed following the site visit. We recommend routine monthly visits. Once enrolled in the program, your participation can be cancelled at any time with no penalty.

If any additional service work is required outside the scope of the Site Quality Assurance Plan, a return visit will be scheduled with the customer. This includes any recommended corrective actions resulting from the site visit, should the client decide to implement them. Additional service charges will apply.
